PVDF TRUE UNION BALL VALVES

True Union Ball Valves are designed for industrial settings. The body of the valve can be replaced without dismantling the surrounding piping. The PVDF version of this valve is for specialty applications such as concentrated Sulfuric Acid.

The seals on this valve are available in EPDM or FPM (generic name for Viton). The seats on these valves are PTFE.

This valve is available in most sizes with either threaded or flanged ends.

In PVDF, this valve is available in sizes from 1/2" to 4".
