

# Seismic & Wind Restraint System

For Bailiff Enterprises Vertical Tanks above 5,000 gallons in capacity.

Our Seismic and Wind Restraints system consist of:

- heavy duty tie-down lugs (4) molded into the upper sidewall of the tank.
- 1/2" thick galvanized steel cable. It has excellent flexibility and good abrasion resistance.
- 4" tall x 4" deep x 1/2" thick cable anchors fabricated from galvanized A36 steel.

The 1/2" steel cables are looped through the molded tie-downs on the tank and attached to the attached to the anchors with 1/2" galvanized steel shackles.

The restraints are rated for 120 mph winds. 3rd party engineered seismic ratings for a specific location are available at additional cost.
