CPVC BOLTED DOUBLE FLANGES

Bolted flanges provide a secure way to attach pipes to a tank and are often used in industrial applications. One type we offer is made from CPVC. CPVC offers useful compatibility with certain chemicals and can be used for applications up to 200F.

Bolted Spool Flanges offer a secure connection to the tank and an extended flange face to use when attaching valves or pipes. Our CPVC spool flanges have loose flange rings on the extended flange to make it easier to connect to pipe or valve flanges.

Select from the hardware and gasket materials to best suit your application,
