SELF-ALIGNING BULKHEADS

Self aligning bulkheads are dome fittings that allow vertical pipe orientation on a sloped surface. They are not to be used in any situation where liquid will be against the fitting, such as a sidewall of a tank.

The bulkheads are available in pipe sizes from 1" to 4". They are available in PVC, CPVC and Polypropylene. Not all sizes are available in all materials.

When connecting threaded plastic fittings, be sure to use Teflon (PTFE) impregnated plumbers paste rather than Teflon tape. Teflon tape can bunch up an cause a fitting to crack.
